

Save Money with Solar Panels

The UK wants people to use solar panels to save money on energy bills. This plan will make energy cheaper, create jobs, and help the environment.

Families can save £500 a year with solar panels. The government wants new homes to have them and is finding ways for flats to use plug-in solar.

The UK supports solar energy. Schools and hospitals are using it too. This helps use less fossil fuel and makes energy cheaper and safer.
