

Raja Ampat in Indonesia has rich sea life. Nickel mining for car batteries harms it. The government stopped some mining, but damage worries remain.

Forests are gone, and dirty water hurts coral reefs. This is bad for fish and plants. One company can still mine on Gag Island.

Nickel is used in batteries. Getting nickel can harm nature. Indonesia makes a lot of nickel. People worry about pollution and losing land.

Balancing money and the environment is hard. Dr Erdmann says we must consider damage. Nickel areas face climate change risks like rising sea levels.
