

Health Survey Shows Big Differences

A health check in Brighton and Hove showed poorer areas have more health problems. 56% in poorer areas are healthy, compared to 76% in richer areas.

The survey found that people in poorer areas smoke more and exercise less. It also showed that many people took drugs not given by a doctor and had.

Over 16,500 people took the survey. It will help the city improve health and fairness. It also looked at gambling and unfair treatment.
