

The UK is giving over £500 million for hydrogen energy, creating jobs in Merseyside and Teesside to lead in clean energy.

The money will build a hydrogen network to connect where it's made to where it's needed, helping power stations and energy-heavy industries.

The plan cuts fossil fuels, secures energy, and creates jobs for engineers and builders. It helps keep the UK's industry strong.

The UK is starting new hydrogen projects. This will help the environment and make sure we have enough energy. The government is helping with this.
