

An Air India plane crashed near the airport after take-off from Ahmedabad to London. 241 people died, and only one person survived.

Experts will find out why the Boeing 787-8 Dreamliner crashed. This is its first fatal crash since it started flying in 2011.

The plane's engines might stop if they don't get fuel or if birds hit them. This is rare.

If the plane's flaps are not set right, it might struggle to lift off the ground.

A plane flew low and crashed into homes. People were busy helping at the crash site.

The crash surprised many. People are praying for the victims. Experts will check all reasons for the crash, but it will take time.
