

The chikungunya vaccine is paused for people 65+. It's safe for ages 18-64.

MHRA checks Valneva's vaccine safety. It's not in the UK yet. The virus spreads by mosquito bites in hot countries. No immediate worry.

People with the virus get fever and joint pain. Most feel better in 7-10 days, but some have long pain. The virus doesn't spread person to person.
