

The UK will spend £86 billion on science to make new medicines, better batteries, and AI. This will help grow the UK economy.

By 2029, over £22.5 billion yearly will be spent. Local leaders will help decide how. This will make new jobs and help areas grow.

The money will help research in life sciences and clean energy. Liverpool and South Wales will get help to use their special skills.

A new fund of £30 million will help certain areas in the UK to grow and make new things.

The government wants to make life better by creating jobs, improving health, and leading in new technology.

The plan wants the UK to be great for science and tech, helping people and communities do well.
