

Helping People Stay Healthy

Dulas in Wales makes fridges to keep vaccines cold using the sun. They help over 80 countries. The UK government and a bank support them with money.

Dulas started making fridges in 1982. They have a special mark from the World Health Organisation for being very good and safe.

The government helps Dulas make fridges. This keeps jobs in Wales and helps make fridges for places in need, even in hard times.
