

DUCHESS is a tool by DIEM Analytics, funded by DASA, to help the military learn from interviews with many people.

DUCHESS asks questions and listens like a person. It uses smart computer skills to learn more than simple surveys.

DIEM Analytics began as a consulting company. In 2019, they got funding for DUCHESS, a tool used by the Royal Navy and NATO.

When COVID-19 came, DIEM Analytics made DUCHESS work online, helping them get more users worldwide, including the Canadian Air Warfare Centre.

DIEM Analytics and DASA made smart tools to spot unusual things at sea and predict what enemies might do next.

DIEM Analytics wants more people to use DUCHESS in health and safety, using what they learned from DASA to grow and help more people.
