

How We Clean Water at Sellafield

SIXEP at Sellafield cleans water used in nuclear work. It removes bad stuff before the water goes into the sea. It's important for safety.

SIXEP cleans water with sand filters and ion beds. It started in 1985 and is like kidneys for Sellafield, cleaning water like kidneys clean blood.

SIXEP is getting bigger with SCP to work well for years. The new part will be ready by 2030 to manage waste better.
