

The UK is using AI to make homes warmer and cut bills. They support 10 ideas to help the UK lead in clean energy.

The Manchester Prize is for smart AI ideas to help the planet. Ten teams aim to make homes warmer and cut energy costs. Winner announced next year.

Smart panels warm homes from outside. Drones find heat loss. These ideas save money and help the environment by using less energy.

The Manchester Prize helps new ideas by giving money and advice so teams can make their ideas real and ready to help by 2030.

The UK wants to lead in clean energy. AI can help cut pollution from industries like cement and steel, which cause a lot of pollution.

AI can also help the energy grid work better with clean energy like wind and solar. This helps keep the lights on while using less dirty energy.

The UK government wants to help save energy and clean the environment. This is part of their Plan for Change to improve life for all.

The Manchester Prize and AI help the UK cut energy costs and pollution, giving families warmer homes and a cleaner planet.
