

A plane crashed in India on a flight to London. The black box was found and will help find out why the crash happened.

241 people on the plane died, only 1 survived. Some on the ground also died. Families are waiting for news about their loved ones.

The black box records plane height, speed, and pilots talking. This helps investigators understand what happened.

Experts from India, the US, and the UK are looking into the crash. The plane was 11 years old and often flew from India to places in Europe.

The Prime Minister of India visited the crash site. Families are sad and waiting for news. DNA is being used to help identify people.
