

The government plans to add solar panels to new UK homes to save money on energy bills. This is part of the Future Homes Standard.

The Future Homes Standard will be out in Autumn. New homes will have solar panels and heat pumps to save energy and make the UK more energy secure.

Solar panels save about £530 a year by using the sun for electricity. New homes will be cheaper and better for the planet.

The government wants new homes to have solar panels, except those in shade, to be modern and energy efficient.

The Future Homes Standard will help people use heat pumps for clean energy. This will save money and make homes warmer.

People are happy about these plans. They think it will help the UK use more green energy, improve homes, create jobs, and lower tech costs.

The Boiler Upgrade Scheme gives up to £7,500 for heat pumps, saving families about £100 a year. More people are applying for this help.

The government is working with experts to help homebuilders make good homes. This will help the UK meet its energy goals.

These changes will help the UK have cheaper, cleaner energy. The Future Homes Standard will make homes better and more energy secure.
