

Scotland will get the UK's most powerful supercomputer in Edinburgh. It costs £750 million and helps scientists find new medicines.

The UK plans to grow AI power to lead in technology, help the economy, and make life better for everyone.

The supercomputer will help with health and climate research, testing new drugs, and solving big problems.

The University of Edinburgh will have a new supercomputer. It will be stronger than ARCHER2. More details will come soon.
