

People from Bassetlaw visited Culham Campus to learn about fusion energy, a new way to make clean power like the sun's energy.

The STEP programme plans to build a power plant at West Burton. It will create jobs, help the area grow, and provide clean energy for the UK.

The UK Atomic Energy Authority is working to show fusion energy can help the world and bring new ideas and science.

People in Bassetlaw are glad about the work at Culham. They hope it will improve their area and bring more jobs and money.
