

Rolls-Royce will build small nuclear reactors in the UK. They are quicker to build and will make clean energy and jobs.

The project will power 3 million homes, create 3,000 jobs, and cost £2.5 billion. It aims to make the UK a leader in clean energy.

Great British Energy plans to build nuclear reactors soon. They aim to connect them by the mid-2030s to boost UK energy security.

The UK wants to lead in clean energy, create jobs, and use new tech. The government is making it easier to build reactors.
