

The Prime Minister started a plan called TechFirst. It helps young people learn about AI and tech jobs in schools.

The government is spending £187 million to teach digital skills in schools for all ages to learn about tech jobs and have equal chances.

By 2035, many jobs will use AI. The plan helps 1 million students learn tech in schools with online tools for tech jobs.

Local partners will help run the programme. The AI sector is growing fast, and this plan will help more people learn AI skills.

Big companies will help train people to use AI. This will help people find good jobs and earn more money.

The plan helps graduates and small businesses with money for scholarships and new tech ideas, keeping the UK strong in tech.

The government wants to help 7.5 million workers learn AI skills by 2030 to improve their work.

The Prime Minister is helping schools and companies teach important skills. This will help the UK grow and give people better job chances.
